Art Unit 1804

This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claims 64-72 are rejected under 35 U.S.C. § 112, first paragraph, as the disclosure is enabling only for claims limited to the preparation and use of stabilized forms of oligodeoxyribonucleotides that are phosphotriesters. See M.P.E.P. §§ 706.03(n) and 706.03(z). This rejection is repeated for reasons already of record. Applicant's arguments (paper no. 28) and the declarations by Drs. Ruth and Schwartz (filed September 6, 1994) are not convincing. The arguments and declarations do not address the issue of stability of the oligodeoxyribonucleotides *in vivo* (the declarations are silent on this issue). Paper no. 28 at page 5, first full paragraph asserts that the use of a stabilized nucleic acid is not the inventive principle of the instant invention and that any nucleic acid will work in the claimed method. This argument is most unconvincing in view of the argument made by applicant in the parent application (see patented file of U.S. Patent No. 5,023,243, paper no. 8 (filed February 9, 1984), page 3) wherein applicant says of a reference, "Zamecnik and Stephenson used an unprotected oligonucleotide, which would break down in vivo before having the desired effect." Thus, applicant's current assertion that any nucleic acid will work is in conflict with applicant's earlier statement.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a).
